

## Protecting Your Front-Line Staff Has Never Been More Critical

The safety of your healthcare workers is your #1 priority—and it's ours too. COVID-19 has created a perilous situation for the occupational health industry. Making Theraworx Protect Advanced Hygiene and Barrier System part of your COVID-19 assessment and control plan is one way to ensure you're doing everything you can to help keep employees safe and reduce liability risks.

### Close the Gaps, With Dual-Defense Theraworx Protect

Theraworx Protect is a clinically proven, advanced hygiene solution that helps protect not only the hands but also the face, complying with the CDC's guidelines on facial cleansing. And this non-toxic, no-rinse solution is safe to use on the T-zone—the area leaving healthcare workers most vulnerable to infection.

Not only that, but because Theraworx Protect is safe to use on the ocular mucous membranes, it can be used as an additional ocular contact safety measure before donning PPE.

What's more, Theraworx Protect supports the skin's natural antimicrobial barrier and defensive functions, helping to prevent skin breakdown and maintain the integrity of the skin underneath PPE. Plus, Theraworx Protect supports the skin for up to 4-6 hours, meaning fewer re-applications.
